Abstract: The management of municipal solid waste has become an acute problem due to enhanced economic activities and rapid urbanisation. Increased attention has been given by the government in recent years to handle this problem in a safe and hygienic manner. In this regard, Municipal Solid Waste Management (MSWM) environmental audit has been carried out for Bangalore city through the collection of secondary data from government agencies, and interviews with stakeholders and field surveys. Field surveys were carried out in seven wards (representative samples of the city) to understand the practice and identify the lacunae. The MSWM audit that was carried out functional-element-wise in selected wards to understand the efficacy and shortfalls, if any, is discussed in this paper.

Keywords: solid waste; environmental auditing; functional elements; composting; landfill sites; municipal solid waste management; MSWM.

Biographical notes: Ramachandra holds a BE (Electrical Engg) from Bangalore University, India and a PhD in Energy and Environment from the Indian Institute of Science. He has made significant contributions in the area of energy and environment. His areas of research include energy systems, environmental management, regional planning, spatial decision support systems, GIS and remote sensing. He teaches principles of remote sensing, digital image processing, renewable energy technologies, and natural resources management. He has published over 108 research papers as well as nine books. His latest book entitled *Management of Municipal Solid Waste*, 2006, has been published by Capital Publishers, New Delhi. He is a fellow of the Institution of Engineers (India) and Institution of Electrical Engineers (UK), senior member, IEEE (USA) and AEE (USA), and many similar institutions. Details of his research and copies of publications are available at <http://ces.iisc.ernet.in/energy/WELCOME.html>.
